Rabail

AMK Technology · Malaysia

Dear Rabail,

I'd like to apply for the Full Stack Python Developer role on your agentic AI platform. It's a close match to what I do today, and the onsite move to Malaysia with visa support is exactly the step I'm looking for next.

Why I think I'm a fit:

- 5+ years building complete web products end to end, a lot of it in Python.
- I build the kind of AI assistant and LLM-powered features your platform is about, and ship them to real users.
- I work independently and get up to speed on an unfamiliar codebase fast, which your post asks for.
- I've worked remotely with international teams for years, and I'm ready to relocate and work onsite.

On paper I'm slightly under the posted experience range. In practice, the agentic AI and Python work you're hiring for is exactly what I've spent the last few years on, and I ramp up quickly. My CV is attached, and I'd welcome a short call to tell you more.

Best regards,

Danish Siddique
